TEL Application Profile for objects (version 1.5)

Introduction

The concept of application profiles has emerged within the Dublin Core metadata initiative as a way to define which elements and values are used in a particular application or project. Application profiles are defined as schemas which constrain the scope of applications so that those terms have been selected together by implementors, and optimized for a particular local application. In the remainder of the text the term "profiles" is used to include domains, element refinements and creating classes.

The TSL metadata working group has begun the preparation of 2009/06/28 v1 of the DC:element which forms the *Core* application profile. It is starting point for the TSL application profile for Objects version 1.5. Terms were extracted from the Framework of the TSL, taken from the original set of some terms have been added. While applying the information about the terms in the TSL, we have been able to learn directly from the Dublin Core application Profile, how the RISM and IFLA standards apply similar terminologies in appropriate. However, there are still differences and changes between them to be made for the Metadata for TSL projects. For a better understanding of the kinds of application profiles, please refer to the *Core* metadata.

The TSL application profile for Objects is a subset of terms generated from the TSL metadata Initiative. The Registry for Objects contains:

- all the terms that will be used in TSL, whether for the description of objects, collections or (in future versions) cases, authorities

The screenshot shows the 'European Library Handbook' website. The header includes the logo and the text 'The European Library Handbook' and 'The European Library Handbook'. The main navigation menu on the left lists: Home, Handbook, Using the European Library Handbook, Introduction to Collections, Introduction to Collections, Preparing my metadata (selected), and Introduction to Collections. The main content area is titled 'Preparing my metadata' and contains a list of links: 'The European Library metadata handbook', 'The European Library application profile', 'Metadata compliance with the European Library application profile', 'Choosing metadata elements', 'The application profile metadata', 'How to add additional services to profiles', 'Testing my metadata', 'Comparing the application profile', 'Help: choosing my metadata', and 'Further support: Contact the relevant technical manager'. The footer shows '© European Library 2014'.

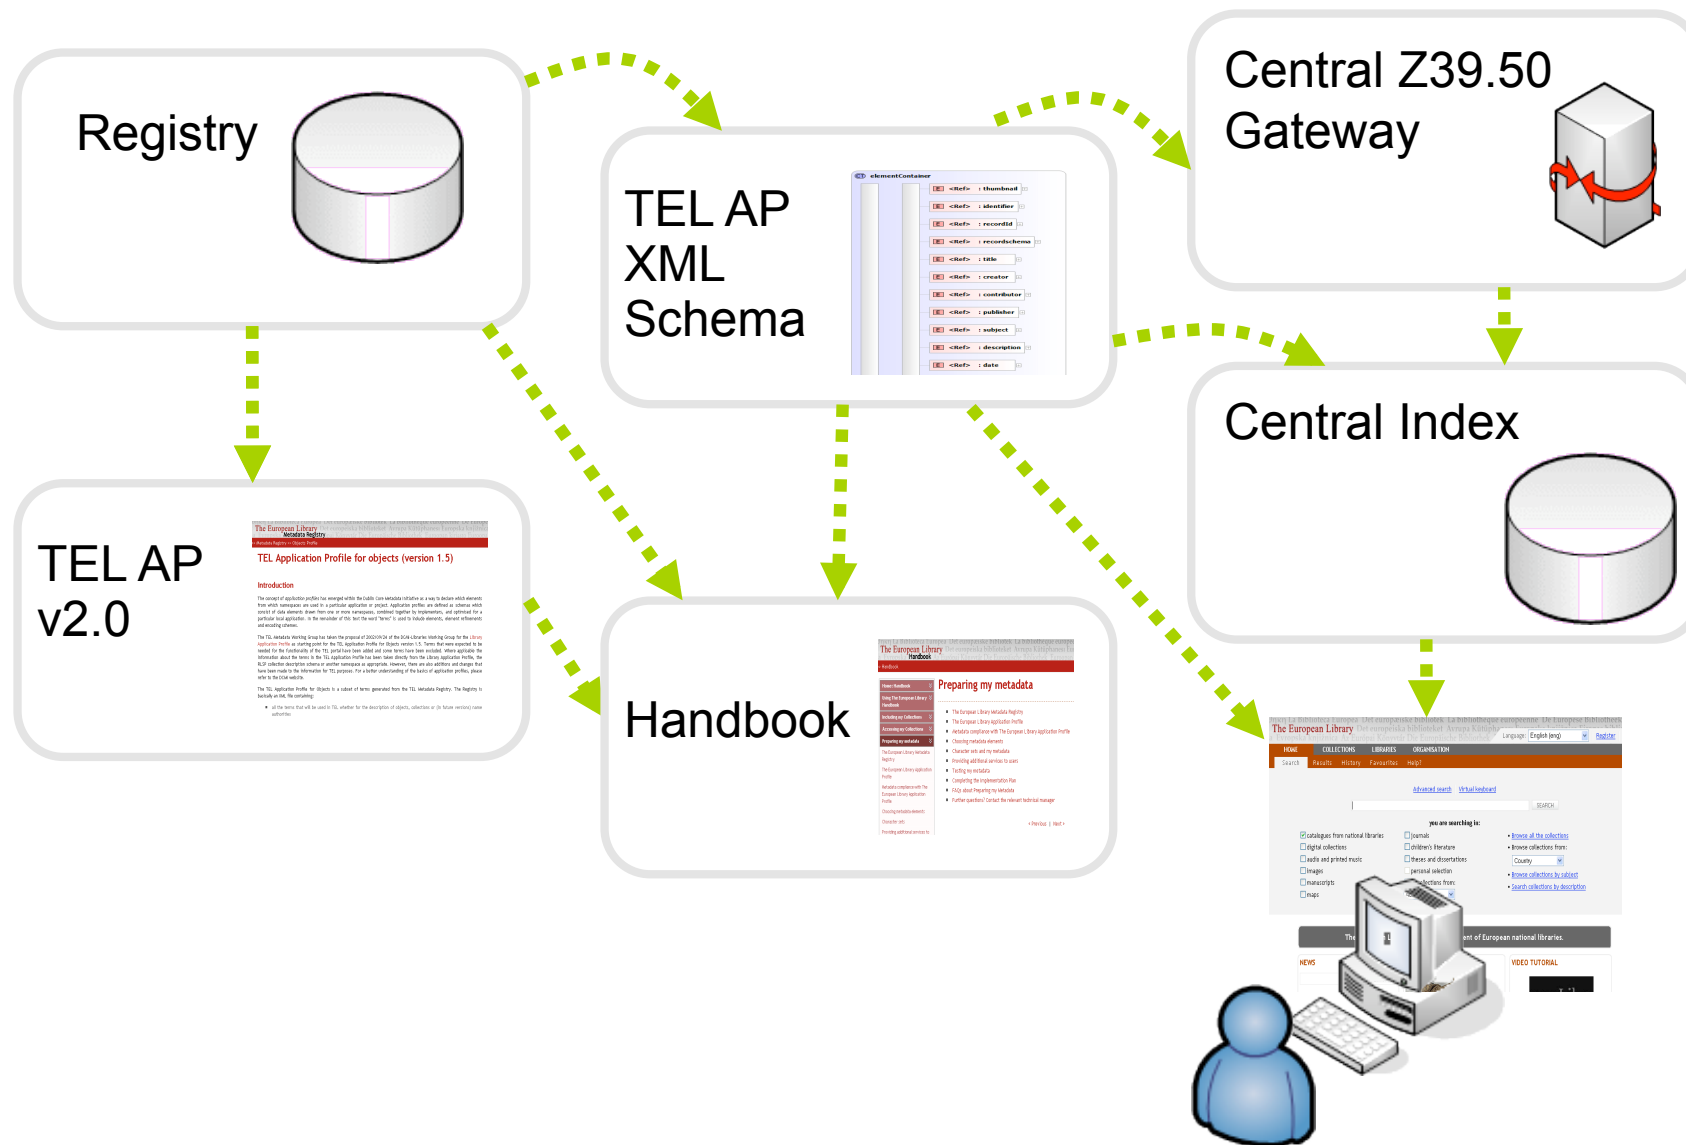

The screenshot shows the 'Preparing my metadata' page on The European Library website. The page has a dark blue header with the logo and navigation tabs. A sidebar on the left contains a 'Metadata' section with links to 'Using The European Library's Metadata', 'Understanding Collections', 'Importing my Metadata', and 'Preparing my Metadata'. The main content area is titled 'Preparing my metadata' and lists several key points:

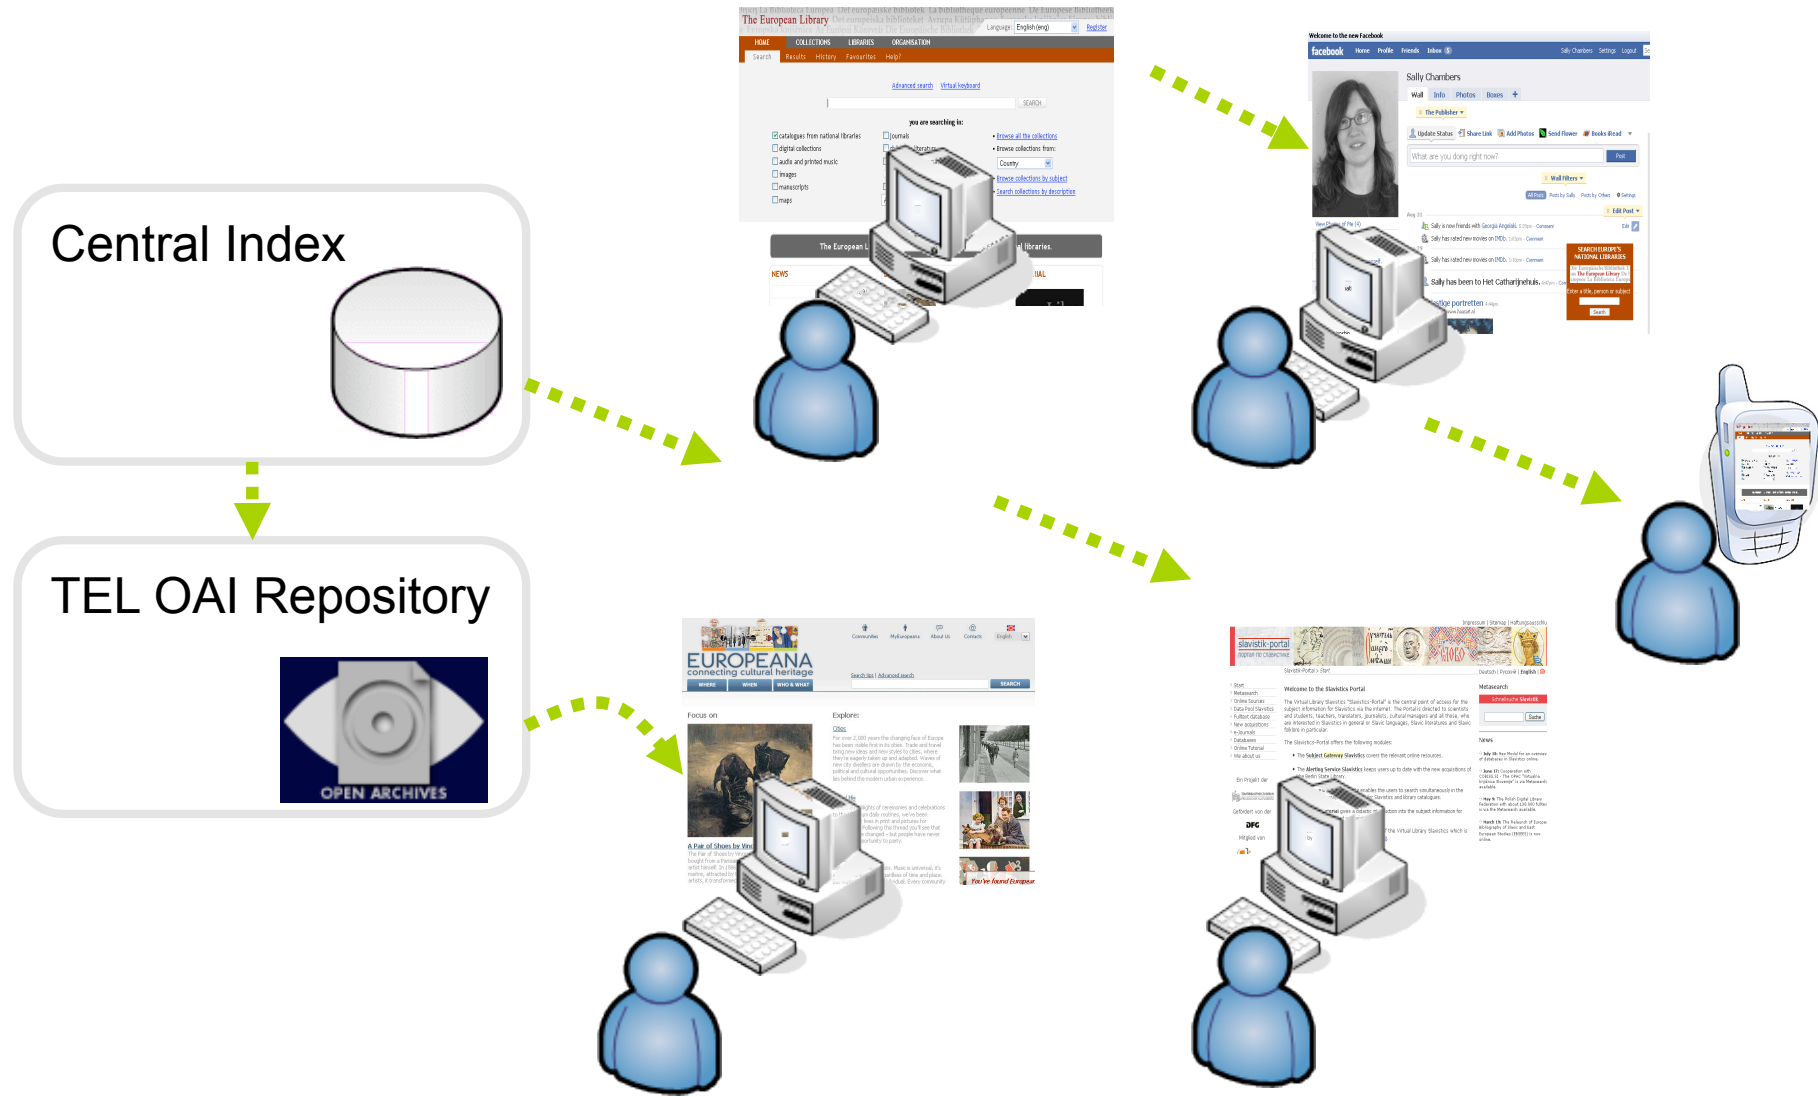

- The European Library metadata format
- The European Union Application Rules
- Metadata compliance with The European Library Application Rules
- Choosing metadata elements
- Character sets and encodings
- How to find and use services to assist with metadata
- Using the metadata
- Completing the Implementation Plan
- How about Preparing my Metadata
- FAQs regarding The current relevant technical standards

 At the bottom right, there is a 'Print this page' link.
